

Course: Full Stack Web Development

Course Code: 23CM4121

Experiment No : 1

Student Name: M. Vanisree

Roll No.: A24126552125

Date: 25-08-2026

Title

Design Static Webpage Using HTML Components

Aim

To design and develop a **static webpage using HTML components** and understand the usage of various HTML elements such as headings, paragraphs, links, lists, tables, forms, audio, video, sections, and footer.

OBJECTIVE

The objectives of this experiment are:

- To understand the basic structure of an HTML webpage.
 - To learn and use different HTML elements.
 - To create headings and paragraphs using HTML.
 - To implement hyperlinks using the <a> element.
 - To display information using ordered and unordered lists.
 - To create and format tables using HTML table elements.
 - To design a student registration form using form controls.
 - To embed audio and video content in a webpage.
 - To understand the use of semantic elements such as <section> and <footer>.
 - To develop a complete static webpage using HTML components.
-

THEORY

HTML (HyperText Markup Language) is the standard markup language used to create and structure webpages. HTML uses different elements and tags to define the structure and content of a webpage.

In this experiment, various HTML components are used to create a static webpage containing information about **Anil Neerukonda Institute of Technology & Sciences (ANITS)**, student details, a registration form, and multimedia content.

The important HTML components used are:

- **<h1>, <h2>, <h3>** – Used to define headings of different levels.
- **<p>** – Used to display paragraphs.
- **<a>** – Used to create hyperlinks to external webpages.
- **, , <u>** – Used for bold, emphasized, and underlined text.
- ** and ** – Used to create unordered lists.
- ** and ** – Used to create ordered lists.
- **<table>** – Used to display information in rows and columns.
- **<form>** – Used to collect user input.
- **<input>** – Used to create text, email, password, radio button, and checkbox controls.
- **<select> and <option>** – Used to create a dropdown list.
- **<textarea>** – Used to accept multi-line text input.
- **<button>** – Used to create form buttons.
- **<audio>** – Used to embed audio content.
- **<video>** – Used to embed video content.
- **<section>** – Used to divide the webpage into logical sections.
- **<footer>** – Used to define the footer of the webpage.

The basic structure of the webpage can be represented as:

HTML Document → Sections → Text/List/Table/Form → Multimedia → Footer

Since the webpage is static, the content is directly written in HTML and does not require server-side processing or a database.

ALGORITHM / PROCEDURE

1. Create a new HTML file.
2. Define the basic HTML document structure.
3. Create an **About** section using the **<section>** element.
4. Add headings and paragraph content using heading and paragraph tags.

5. Add a hyperlink to the ANITS website using the <a> element.
6. Create an unordered list to display the courses offered.
7. Create another unordered list to display the departments.
8. Create an ordered list to display the application procedure.
9. Create a **Student Details** section.
10. Design a table using <table>, <tr>, <th>, and <td> elements.
11. Create a **Student Registration Form**.
12. Add text, email, password, radio button, checkbox, dropdown, textarea, and buttons to the form.
13. Embed an audio file using the <audio> element.
14. Embed a video file using the <video> element.
15. Add a footer using the <footer> element.
16. Save the HTML file.
17. Open the HTML file in a web browser.
18. Verify that all sections, lists, table, form, audio, video, and footer are displayed correctly.
19. Perform multiple test cases to verify the webpage components.
20. Compare the expected output with the actual output.

Code explanation:

HTML (HyperText Markup Language) is used to create and structure the content of web pages. In this experiment, a static webpage is designed for **Anil Neerukonda Institute of Technology & Sciences (ANITS)** using different HTML components.

The webpage contains information about the college, courses offered, departments, and application procedure. It also includes a **student details table**, **student registration form**, **audio and video elements**, and a **footer**. Various HTML tags such as <section>, <h1>, <h2>, <p>, <a>, , , <table>, <form>, <input>, <select>, <textarea>, <button>, <audio>, <video>, and <footer> are used.

HTML Components Used

HTML Component	Purpose
<section>	Divides the webpage into different sections
<h1>, <h2>, <h3>	Displays headings
<p>	Displays paragraphs
<a>	Creates a hyperlink

, , <u>	Provides text formatting
, ,	Creates unordered and ordered lists
<table>	Displays student information in tabular form
<form>	Creates a student registration form
<input>	Accepts user input
<select>	Provides a dropdown list
<textarea>	Accepts multiple lines of text
<button>	Creates buttons
<audio>	Embeds audio
<video>	Embeds video
<footer>	Displays footer information

TEST CASES AND EXECUTION DATA

The webpage was tested by checking each major HTML component and verifying whether it was displayed correctly in the browser.

Test Case	Component Tested	Action / Input	Expected Result	Actual Result	Status
TC-01	Headings, Paragraphs & Lists	Open the webpage	Content, headings and lists should be displayed correctly	Displayed correctly	Pass
TC-02	Hyperlink	Click the ANITS link	ANITS website should open	Website opened successfully	Pass
TC-03	Student Details Table	View the table	Student details should be displayed in rows and columns	Table displayed correctly	Pass
TC-04	Registration Form	Enter details and select options	Form controls should accept the given inputs	Inputs accepted successfully	Pass

TC-05	Audio & Video	Play the audio and video	Audio and video should play with controls	Media played successfully	Pass
--------------	---------------	--------------------------	---	---------------------------	-------------

Output:

The screenshot displays the homepage of Anit's (Anand Institute of Technology & Science). The page includes a header with the institute's name and logo, a navigation menu, and a main content area. The main content area features a 'Welcome to Anit's' message, a list of courses offered (B.Tech, M.Tech, MBA, MCA), a list of departments (Computer Science and Engineering, Artificial Intelligence & Machine Learning, Electronics and Communication Engineering, Mechanical Engineering, Civil Engineering), and a 'To Apply' section with a list of steps. Below this is a 'Student Details' table with columns for Roll No., Name, Branch, and Email. The table contains three rows of data. At the bottom, there is a 'Student Registration' form with fields for Name, Email, password, and gender, a 'Register' button, and a video player showing a 0:00 duration.

Welcome to Anit's

Anit's (Anand Institute of Technology & Science) is a leading Institute of Technology & Science in India with headquarters at Hyderabad. The institute was established in the academic year 2001-02 by Anand Institute of Education (AIE) which was founded by Dr. N.R. Prasad, an IIT Alumni from the USA, with infrastructure and eminent educators in memory of his son Late Anand Institute.

Courses offered

- B.Tech
- M.Tech
- MBA
- MCA

Departments

- Computer Science and Engineering
- Artificial Intelligence & Machine Learning
- Electronics and Communication Engineering
- Mechanical Engineering
- Civil Engineering

To Apply

- Register online
- Fill in your personal details
- Upload certificates
- Pay the application fee
- Download the confirmation receipt

RESULT

Thus, a **static webpage using HTML components** was successfully designed and developed. Various HTML elements such as headings, paragraphs, hyperlinks, ordered and unordered lists, tables, forms, audio, video, sections, and footer were implemented successfully. The webpage was tested in a web browser and all the components were verified to be displayed and function as expected.
